

**Tabel 1. Berekende graaddae (°D) vir sewe weerstasies in vyf wingerdbouareas. Estimated degree days (°D) for seven weather stations in five grape growing areas**

**LET WEL:** Hierdie data word slegs vir enkele geselekteerde areas aangegee met die doel om praktiese implementering van die model in die bedryf te toets. Die geakkumuleerde graaddae is nie op alle areas van toepassing nie. Die verskyning van witluis in u wingerde (verkry uit u eie moniteringsdata) kan wel met die voorspelling van die weerstasie naaste aan u vergelyk word om te bepaal hoe goed daardie weerstasie toestande op u plaas weerspieël.

**NOTE:** These data are supplied for selected areas only. The aim is to evaluate practical implementation of the model in the industry. The accumulated degree days do not apply to all areas. The appearance of mealybug in your vineyards (as shown by your monitoring data) can be compared to the predictions of the weather station closest to your farm to determine how closely the weather station reflects conditions on your farm.

Wingerdbou- area/ Grape growing area	Weerstasie/ Weather Station	Geakkumuleerde Graaddae tot op/ Accumulated Degree days up to		Eerste Graaddag-siklus (235 °D) voltooi op		Tweede Graaddag-siklus (470 °D) voltooi op		Derde Graaddag-siklus (705 °D) voltooi op		Vierde Graaddag-siklus (940 °D) voltooi op		Vyfde Graaddag-siklus (1175 °D) voltooi op	
		11-03-2006	11-03-2007	2005/06	2006/07	2005/06	2006/07	2005/06	2006/07	2005/06	2006/07	2005/06	2006/07
